

# RESTONIC®

## HOSPITALITY COLLECTION

### RESTONIC "HARRISON"

#### **INNERSPRING**

The Restonic® Hospitality Collection features quality Bonnell innerspring units produced only with the finest quality wire and then totally oven tempered. Each coil is constructed of 13 gauge wire and the border rod is made with a heavy 6 gauge wire for added strength. The Harrison features a 336 coil (full size) Bonnell innerspring for superior strength and performance.

#### **UPHOLSTERY**

Each Restonic Bonnell innerspring is covered with a stitch-bonded insulator pad to prevent coil feel and reduce pocketing. Additional layers of luxurious polyurethane foam are added to enhance support and provide comfort. The Harrison utilizes a generous 3/4" thick layer of polyurethane foam to provide comfort.

#### **COVER**

Restonic uses only quality, durable, woven damask covers on its commercial bedding products. In addition to being treated to pass the MVSS 302 flammability standards, Restonic will take particular care to insure that all products meet or exceed federal, state and local fire requirements as specified by the customer. The Harrison cover is quilted to a generous 3/4" thick layer of polyurethane foam.

#### **BOX SPRING**

The Restonic Tru Flex Contract box spring is the finest commercial modular box spring we have ever offered. Constructed of heavy 9 gauge wire, each Tru Flex module is fastened at two points to the box spring frame. This provides for added strength and durability. The full size box spring uses 54 modules which are fastened at 108 points versus a normal 81 coil count box spring. The Tru Flex Contract box spring unit is also designed to provide extra strength in the middle where it is needed the most. The one piece grid top is electronically welded at the border and at all intersecting points for added stability. Each Restonic Tru Flex Contract box spring is covered with a stitch bonded insulator pad and a non-skid box spring top panel with wrap around border. The non-skid surface helps to prevent the mattress from shifting on the box spring. Heavier wire, more fastening points, re-enforced middle. Don't settle for anything less than a Restonic Tru Flex Contract box spring.

#### **OTHER**

Product identification labels, mattress turn labels, and Restonic box spring corner guards are standard features on all Restonic commercial mattress and box spring products.

#### **WARRANTY**

7 Years – 1 Year Non-Prorated.
